The Fourth Forum on NCD Management: International experience boosts NCD prevention and control in China

April 2013 marked an important month for the Chinese people who have been concerned with health care and non-communicable diseases (NCD) prevention and control. The Fourth Forum on NCD Management was held at Beijing International Convention Center.

The Forum featured 11 events, including seminars and workshops, with distinguished guests from China, the United States, and the United Kingdom. The events were organized jointly by the Global Health Institute (GHI) and the Chinese Health Focus (CHF).

The Forum’s main objectives were to share international experiences in NCD management, promote cooperation in research and education, and establish a platform for NCD prevention and control professionals from China and other countries.

China’s challenges

China is facing significant challenges in NCD management. The country has a rapidly aging population, with an anticipated 25% increase in the number of people aged 60 or older by 2030. This population growth is accompanied by an increase in NCDs, such as cardiovascular disease, diabetes, and cancer.

Expertise from abroad

The Fourth Forum brought together experts from China, the United States, and the United Kingdom to share their knowledge and experiences in NCD management. The forum provided a platform for NCD prevention and control professionals from China and other countries to exchange ideas and experiences, fostering international cooperation.

The forum also featured a panel discussion on the future of NCD management in China, with participants from various organizations. The participants discussed the challenges and opportunities in NCD management, with a focus on prevention, research, and education.

Conclusion

The Fourth Forum on NCD Management was a success, providing valuable insights and experiences for NCD prevention and control professionals in China. The forum highlighted the importance of international collaboration and cooperation in addressing the challenges of NCD management.

Future prospects

The Fourth Forum on NCD Management set the stage for future collaboration and cooperation in NCD management. The forum’s success has demonstrated the importance of international partnerships in addressing the challenges of NCD management. The forum’s participants are encouraged to continue their collaboration and cooperation, with a focus on prevention, research, and education.

The Fourth Forum on NCD Management was a milestone event, bringing together experts from China, the United States, and the United Kingdom to share their knowledge and experiences in NCD management. Beijing Research Health Lecture Series
Lecture Series
Beijing Research Lecture Series is a joint initiative organised by CHICDPC, Peking University Health Science, China (PUHSC) and the University of Sydney. The series features world-class speakers on topics of importance to chronic disease prevention and control. The first lecture of the series was held in Beijing during the first week of March 2013, with additional lectures held in Shanghai and Sydney.

March 20, 2013

In response to the WHO's Non-Communicable Diseases (NCDs) Initiative, the Institute of Public Health, Peking University Health Science (PUHSC), and the China National Population and Family Planning Commission have published a new report on non-communicable diseases (NCDs) in China. The report, entitled "Health care for the elderly: a challenge for health services in China," examines the current status of health care provision for the elderly in China and highlights the need for improved policies and services to address this growing population. Over 67 million people in China are aged 65 and over, and the number is expected to increase to over 154 million by 2050.

China International Collaboration and Exchange (CIEX)

China International Collaboration and Exchange (CIEX) is a platform for international collaboration and exchange in the health sector. The program aims to promote the exchange of knowledge and expertise between China and other countries, and to facilitate the development of innovative solutions to address the challenges of chronic disease prevention and control. CIEX has been supported by a range of international partners, including the World Health Organization, the World Bank, and the Bill and Melinda Gates Foundation.
